

# XSD The <anyAttribute> Element

[< Previous](#)[Next >](#)

The <anyAttribute> element enables us to extend the XML document with attributes not specified by the schema!

## The <anyAttribute> Element

The <anyAttribute> element enables us to extend the XML document with attributes not specified by the schema.

The following example is a fragment from an XML schema called "family.xsd". It shows a declaration for the "person" element. By using the <anyAttribute> element we can add any number of attributes to the "person" element:

```
<xs:element name="person">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="firstname" type="xs:string"/>
      <xs:element name="lastname" type="xs:string"/>
    </xs:sequence>
    <xs:anyAttribute/>
  </xs:complexType>
</xs:element>
```

Now we want to extend the "person" element with a "eyecolor" attribute. In this case we can do so, even if the author of the schema above never declared any "eyecolor" attribute.

```
<?xml version="1.0" encoding="UTF-8" ?>
<xs:schema xmlns:xs="http://www.w3.org/2001/XMLSchema"
targetNamespace="https://www.w3schools.com"
xmlns="https://www.w3schools.com"
elementFormDefault="qualified">

  <xs:attribute name="eyecolor">
    <xs:simpleType>
      <xs:restriction base="xs:string">
        <xs:pattern value="blue|brown|green|grey"/>
      </xs:restriction>
    </xs:simpleType>
  </xs:attribute>

</xs:schema>
```

ADVERTISEMENT

The XML file below (called "Myfamily.xml"), uses components from two different schemas; "family.xsd" and "attribute.xsd":

```
<?xml version="1.0" encoding="UTF-8"?>

<persons xmlns="http://www.microsoft.com"
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xsi:SchemaLocation="http://www.microsoft.com family.xsd
```

```

    <lastname>Refsnes</lastname>
  </person>

  <person eyecolor="blue">
    <firstname>Stale</firstname>
    <lastname>Refsnes</lastname>
  </person>

</persons>

```

The XML file above is valid because the schema "family.xsd" allows us to add an attribute to the "person" element.

The <any> and <anyAttribute> elements are used to make EXTENSIBLE documents! They allow documents to contain additional elements that are not declared in the main XML schema.
